

Dispelling the Myth: High Poverty Schools Exceeding Expectations

1999

Report of the Education Trust in Cooperation With The
Council of Chief State School Officers and Partially Funded
by the U.S. Department of Education

ACKNOWLEDGMENTS

This report would not have been possible without the support of the following organizations and individuals: Rolf Blank, Council of Chief State School Officers State Education Assessment Center; Elizabeth Reisner and Brenda Turnbull, Policy Studies Associates; Val Plisko and Daphne Hardcastle, U.S. Department of Education; Norm Eaddy and Gary Costello, ISHQ Corporation; Kevin O'Brien, Quick Tab; and Hammertine Bell, temporary assistant.

We also would like to acknowledge the support and efforts of the entire Education Trust staff. We are deeply grateful to each of them.

Dispelling the Myth editors,

Patte Barth
Kati Haycock

The Education Trust was created to promote high academic achievement for all students, at all levels, kindergarten through college. While we know that all schools and colleges could better serve their students, our work forces on the schools and colleges most often left behind in efforts to improve education: those serving low-income, Latinos, African American and Native American students.

Education Trust staff work along policy makers, parents, education professionals, community and business leaders – in cities and towns across the country – who are trying to transform their schools and colleges into institutions that genuinely serve all students. We bring lessons from these communities back to Washington to ensure that in the national policy debate there is a strong, clear voice for what's right for students.

Dispelling the Myth: High Poverty Schools Exceeding Expectations	1
High Performing, High Poverty Schools Directory	15
Technical Notes	93
Appendix A	95

March, 1999

Dear Friend:

Over the past decade, we have watched a kind of creeping malaise infect more and more educators, and, indeed, more and more entire school systems. The clearest manifestation of this malaise is found in the conversations we have with teachers and principals in high poverty schools who often tell us that, “these standards you’re talking about may be fine for some kids, but certainly not for the kind of kids that *we* have in our school.” But the malaise is by no means limited to front-line educators: leaders at all levels – administrators, school boards, legislators – often make policies about things like assessments, graduation requirements, accountability systems and the like, that at their core, expect less of poor children and poor schools.

Somewhere along the line somebody decided that poor kids couldn’t learn, or, at least, not at a very high level. And everyone fell in line.

But the truth is actually quite different. Some poor children have always learned to high levels, and some *whole schools* get *all* of their children to levels reached by only a *few* students in other schools.

Almost everybody knows a school or two like this. But although we tried, we couldn’t find a source of systematic data on high poverty schools performing at high—or dramatically improving—levels.

In the belief that such information would be invaluable both to educators who want to make more of a difference for the children they serve and to policymakers who want to design more effective policy, the Education Trust and the Council of Chief State School Officers cooperated in a project to identify and learn more about top performing high poverty schools. This is the first product from that project. It contains information on 366 schools from the 21 states that agreed to participate. Future reports will, we hope, include more complete information on some of the schools, as well as information from top performing schools in the states that did not participate in the initial study.

We hope this information is useful. We also hope it inspires both the hope that things can be better, and the will to make it that way.

Sincerely,

Kati Haycock
Director

Dispelling the Myth: High Poverty Schools Exceeding Expectations

SECTION 1: A Survey of Top Performing, High Poverty Schools

"We take all of the excuses off the table and have committed ourselves to working with the kids that walk through the door."

-- Principal, Thayer Elementary, Kansas

In 1994, the U.S. Congress made sweeping changes in Title I, the largest of the federal government's elementary and secondary education programs. As originally designed, the law supported efforts by high poverty schools to give their low-achieving students extra help in mastering the most basic skills. The reauthorized Title I pressed participating schools and states to set their sights higher. Indeed, the goal of the new law was an audacious one: to get all students—poor and rich, minority and white—to the same high academic standards.

Congress is now preparing to reauthorize this program once again. During the coming two years, members of key legislative committees and those who advise them will be faced with an important decision: do we continue along the path that we started down in 1994, or do we strike off in another direction?

Some are already beginning to argue that the law isn't working. Achievement as measured by NAEP, overall, isn't up, or isn't up by much. And many Title I schools have continued doing essentially what they were doing before the new law took effect.¹ Maybe we should simply give up, some critics say, and admit that schools will never be able to get poor kids to meet high standards.

But we see too many successful high poverty schools to throw in the towel on their educational futures. If poor kids can't achieve at high levels, why are the students in Hawley Road Elementary School in Milwaukee, 80% of whom are poor, knocking the top off of their state's assessment in reading? And why, too, are the students in Sierra Vista Elementary School in Reno, Nevada, over half of whom are poor, achieving at the highest level on their state's assessment in mathematics? Why, indeed, are students in the highest poverty schools in eight entire states, performing higher in mathematics than the average student in all the other states?

Before anybody—including members of Congress and educators in high poverty schools—gives up on poor kids or on Title I, they need to take a careful look, as we have, at schools that are successfully serving poor children. In the practices of those schools, as well as in their essential spirits, there are many lessons for those of us who hope for more schools like these in the future.

That's what this report is all about: mining the experiences of those who dispel the myth that poor kids can't learn and are proving it everyday through their work in top performing, high poverty schools.

¹ See 1998 report from Citizens Committee on Title I.

In the fall of 1998, the Education Trust constructed and administered a survey of 1,200 schools that had been identified by the states as their top scoring and/or most improving schools with poverty levels over 50%. The work had partial support of the Council of Chief State School Officers (CCSSO). We sought to highlight the success stories of Title I as well as identify characteristics that seem to contribute to high academic achievement among low-income students. The U.S. Department of Education asked the Education Trust and CCSSO to report out their findings. The results are reported in these pages.

The 366 elementary and secondary schools responding to the survey serve student populations that are largely poor. They come from 21 states. They operate in rural isolation and in urban overcrowding. They serve every racial and ethnic group in the country as well as those who come to school with little or no English. Over half the students in these schools are from low-income families; in many of them, poor students comprise over three quarters of the school population.

The survey data reported by the schools' principals were for the 1996-97 academic year. Many of these schools produced results that exceed the best efforts of their suburban counterparts. All of them have met one of two significant criteria: (1) "high performing," that is, among the ten highest performing high poverty schools on state assessments in reading and/or mathematics; or (2) "most improved," that is, among the ten biggest gaining schools on state assessments in reading and/or mathematics.

This is not to say that all the schools in this study have met their goals. Most, by their own admission, recognize that they still have much to do to get their students to the same high academic levels as their peers in affluent schools. Nonetheless, these schools warrant attention for showing gains when too many schools have bought the myth that such progress is not possible with poor children. Their success is revealed by their position at the top of the pack in their states.

Their experiences as reported in this survey should interest both policymakers and fellow practitioners. While no single instructional technique, no particular textbook, no curriculum could be credited with producing these schools' gains, one dominant theme did emerge from the survey. All of these schools are unusually focused on high academic expectations for their students.

Standards undergird each of the six findings in this report. In addition, the findings seem to validate the policies promoted by the 1994 Title I law. In general, we found that these top performing, high poverty schools tend to:

- ***Use state standards extensively to design curriculum and instruction, assess student work, and evaluate teachers.*** A full 80% of the high-performing, high-poverty schools reported using standards to design instruction. Similarly, the successful schools in this study were using standards to assess student work and evaluate teachers.

- ***Increase instructional time in reading and math in order to help students meet standards.*** A 78% majority of top performing, high poverty schools reported providing extended learning time for their students. This time was primarily focused on reading and math.
- ***Devote a larger proportion of funds to support professional development focused on changing instructional practice.*** Changes in the 1994 law require schools to provide for thorough professional development for teachers in high poverty schools. The schools in this study seem to be moving faster than their less successful counterparts to comply with this provision. As important is that the focus of professional development seems to be centered on helping students meet specific academic standards.
- ***Implement comprehensive systems to monitor individual student progress and provide extra support to students as soon as it's needed.*** Four out of five of the top performing, high poverty schools had systematic ways to identify and provide early support to students in danger of falling behind in their instruction.
- ***Focus their efforts to involve parents on helping students meet standards.*** In these schools, traditional roles for parents as fund-raisers are giving way to activities that address parents' knowledge of standards, encourage their involvement in curriculum and involve them in reviewing students' work.
- ***Have state or district accountability systems in place that have real consequences for adults in the schools.*** Nearly half of the principals in these schools were subject to some kind of sanctions if their students fail to show measurable academic improvement.

Not every school in this survey reported having all six of the above characteristics in their programs; most, in fact, had some in various combinations. In addition, we made no attempt to make conjectures about the relative effectiveness of these characteristics. This survey was structured purely to elicit information about the types of practices top performing, high poverty schools engage in. The findings represent the school characteristics that showed up over and over again in the survey responses.

We believe that, even at face value, this information should alert policymakers and educators to policies that seem to hold the most promise for the education of poor children. At the same time, we recognize the limitations of a survey such as this. For this reason, we will be exploring these findings in greater depth in the second phase of this project.

The next section offers a discussion of the six major findings listed above. Sections 3 and 4 follow with an overall profile of the schools responding to the survey and a description of our methodology.

SECTION 2: The Findings

“What it takes is this: Putting kids first and believing all kids can learn. Lots of hard work, a committed staff, trust, compassion and clear standards for behavior and performance.”

Principal, Strafford Elementary, New Hampshire

The Education Trust analyzed the survey data to identify common characteristics of top performing, high poverty schools; to determine how they used Title I funds; and to identify common policies and practices that contribute to student success. In general, we found that the top performing schools were quickest to use state standards to guide their efforts to raise student achievement, as the new Title I law intended. Standards formed the basis of the dominant characteristics and practices in the schools responding to the survey.

Top Performing, High Poverty Schools Report Extensive Use of Standards to Design Curriculum and Instruction, Assess Student Work and Evaluate Teachers

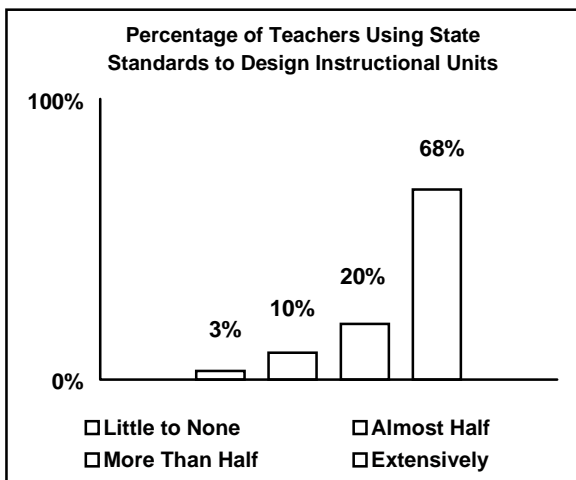

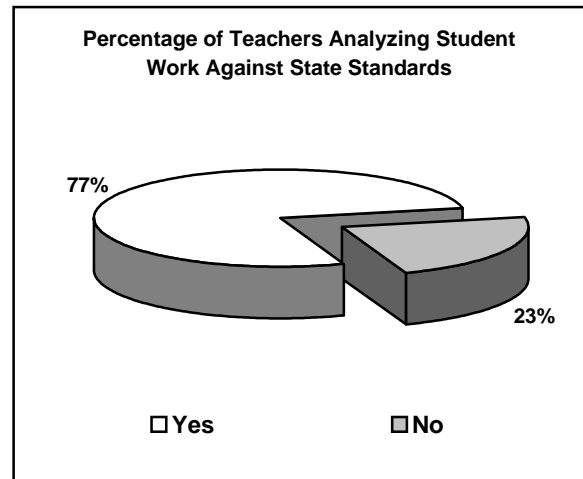

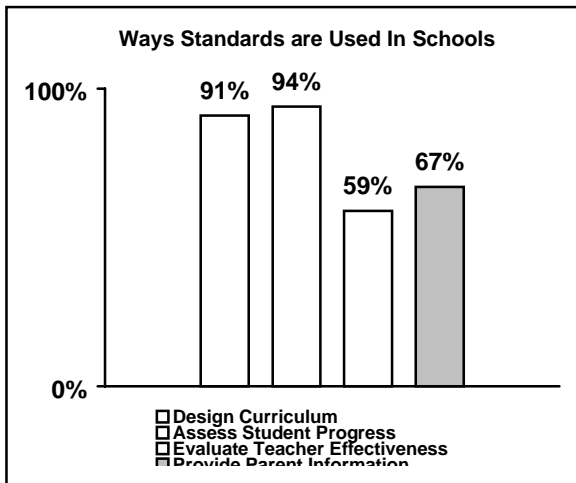

The most significant finding of the Education Trust survey was the extent to which top performing, high poverty schools are using standards to guide school activity. A full 80% report that standards are used extensively in their schools to design curriculum and instruction. Nearly every school in our survey — 94% — uses standards to assess student progress with 77% offering regular mechanisms for teachers to analyze student work against state standards.

The 1994 Title I law was designed to make sure that poor students were held to the same high expectations as their peers in more affluent schools. To this end, the law promotes a system of challenging academic and performance standards for all students in the state. In order to receive Title I funds, schools have to measure the academic growth of low-income students using the same standards and assessments administered to non-Title I students.

This strategy seems to be paying off in the top performing schools in this survey. These schools have become places where all classroom activity is aligned with the state standards. The principal of East New York Transit Tech, for example, credits standards as being one of the most important factors in the school’s ability to increase achievement. Other factors include the recognition among the faculty that all students must meet higher standards and their willingness to work together toward this goal.

Standards also inform teacher evaluations in the top high-poverty schools, 59% of which reported using standards to gauge teacher effectiveness. The Arthur P. Momot school in New York is an example. Momot’s administration focuses instructional staff evaluations on standards implementation based on classroom observations. The evaluations include a look at standards in setting goals and as a basis for teacher portfolios. Arthur P. Momot also provides peer coaching to help teachers strengthen their capacity to teach to the standards.

All the states in this survey have a system of standards and assessments in place. However, evidence from around the country shows that state standards are not a universal presence in day-to-day classroom practice. The top performing, high poverty schools in this survey suggest that the explicit use of state standards in planning and evaluating curriculum, instruction and student work can have a significant impact on raising the achievement of low-income students. Using standards to evaluate teacher effectiveness can further strengthen the alignment of practice to student results.

Top performing, high poverty schools increase the instructional time in reading and math in order to help students meet standards.

The 1994 Title I reauthorization encouraged schools to increase the amount and quality of instructional time to help accelerate the gains of low-income students. A 78% majority of the schools surveyed provide extended learning time that emphasizes core academic subjects, especially reading and math. Research has shown that early mastery of these skills is crucial to learning in other subjects. Students who fail to become proficient readers face an uphill struggle to keep up with increasingly demanding texts and vocabulary. Similarly, students lacking a strong foundation in math often find themselves lost in the high-level high school courses necessary for success in college and work.

The extra time devoted to making sure low-income students are solid in the basics shows in better results for the schools in this survey. Parkview Elementary in Wisconsin credits its emphasis on the basics—reading, math, writing and science—as being integral to the high academic achievement of their students. Lake Agassiz Elementary in North Dakota offers an expanded ten-month experience for K-1 children at risk of academic failure. They credit this program for the considerable gains they show with participating students.

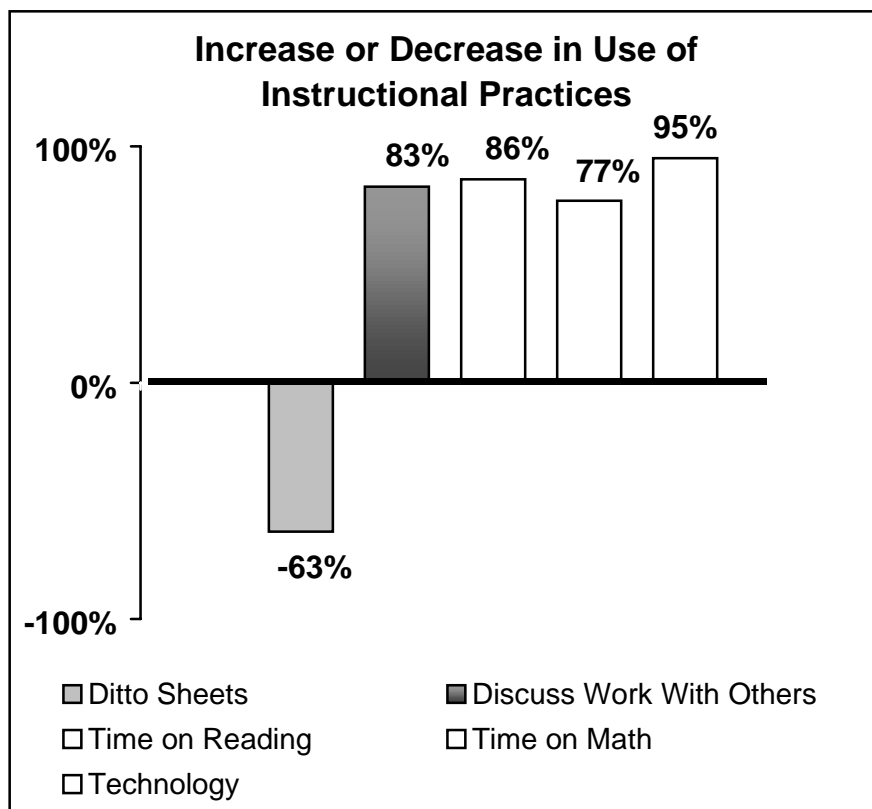

Middle and high schools in this survey also reported adjusting schedules in order to provide students with extended opportunities to develop reading and math skills. In New York City, for example, East New York Transit Technical school restructured its school day with block schedules for math and science, a Copernican model for English and social studies and an extra ten-week cycle to provide extra help in improving students' literacy skills. Of all the schools in the survey, 86% reported an increase in the time spent on reading, and 66% report having increased the amount of time students spend studying math.

The survey also elicited information about the amount of time devoted to particular practices. Recent research has shown relationships between various instructional practices and student achievement scores on the National Assessment for Educational Progress (NAEP).² An analysis of the eighth-grade mathematics assessment, for example, show a negative relationship between the routine assignment of ditto sheets and students' test scores. On the other hand, students who discuss work with other students were shown to also have higher NAEP scores. For these reasons, our survey asked principals whether the amount of time their students spent on specific instructional practices had increased or decreased during the past few years.

² The Education Trust, *Education Watch 1998*, pps. 16-18. Analysis of NAEP 1996 Math Survey Tables.

Overall, among survey respondents, nearly two-thirds (63%) report a decrease in the use of ditto sheets. On the positive side, 83% of the schools reported increasing the amount of time students spend discussing work with others. These data indicate that the top performing schools are moving away from low-level instruction, exemplified by the routine filling out of bubbles on ditto sheets. Rather they seem to be developing higher-order skills by offering students more time for discussion of the subject matter. In addition, 95% reported an increase in the use of technology.

The efforts of these schools respond to the recognition by our nation's leaders that students and schools need to maximize the time spent on teaching and learning the core academic subjects and developing higher order skills if our low achieving children, particularly those from low-income families, are to meet the nation's educational goals.

Top performing, high poverty schools are spending larger proportions of Title I dollars on professional development.

Changes in the 1994 law require schools to provide for thorough professional development for teachers in high poverty schools. There is growing recognition that teachers need time to understand new state standards and to develop strategies for teaching them to poor and minority students. The top performing schools in this study seem to be moving fast to comply with the Title I provision.

Our survey revealed that a full third of the top performing schools were dedicating more than 10% of their Title I dollars to professional development. In comparison, two recent national studies of seven large urban districts estimated that expenditures on professional development ranged from 1.8% to 5.7% of the local school budget.³ Even New York City's District 2 — a school district well-known for attributing its student gains to significant increases in professional development—devotes only slightly more than 5% to professional development.⁴

As important as investing funds, according to our respondents, is making sure that professional development is focused on the implementation of standards and students' needs. Wrote the principal of Nathaniel Green Middle School in Rhode Island: "Over the last few years we have focused our professional development activities toward teaching to standards and modeling our classroom assessment more in line with our state assessments."

Bemiss Elementary in Spokane, Washington, uses the majority of its Title I funds to fund two literacy and two math instructional facilitators to provide regular in-class professional development, study sessions and grade level meetings. Thayer Elementary in Wyoming uses its Title I funds to provide early literacy training staff development to improve the teaching of reading and writing. Thayer's program restructures the teaching of reading and writing in the elementary grades using high-quality children's literature, provides intensive staff development, uses research-based methodology and measures the program's success using validated instruments.

⁴ Panasonic Foundation

Top performing high poverty schools have comprehensive systems to monitor student mastery of standards and provide extra support to those who need it.

Title I emphasizes the use of standards as a strategy for all kids to reach high standards. A key component of this is the requirement that schools monitor the progress of each student and provide appropriate support. The vast majority of respondents — 81% — report that they have in place a comprehensive system for monitoring student progress and providing early support to students in danger of falling behind in their instruction.

Monitoring systems are effective means for providing ongoing analysis of student achievement data. When used for diagnostic purposes, achievement data enable schools to provide immediate help to struggling students and to move them on quickly once they have demonstrated mastery. The Terrell Wells Middle School in Texas identifies students who need extra support and offers help for individual students or groups that includes 40 minutes of daily tutorial. Several schools make weekly progress reports to parents to elicit their help in monitoring student mastery of standards.

The West Bourbon Elementary School in Kansas uses its Title I funds for instructional support staff to assist students who fall below the mastery level. Students are then reassessed to measure improvements in their progress towards standards. Victor Ornelas Elementary School, also in Kansas, analyzes pre- and post-test data by subjects and adjusts its teaching strategies to meet students' specific learning needs.

The push-pull of monitoring progress and providing extra support helps schools to stay on top of the development of each of their students. In this way, they can make sure that no student will fall through the cracks.

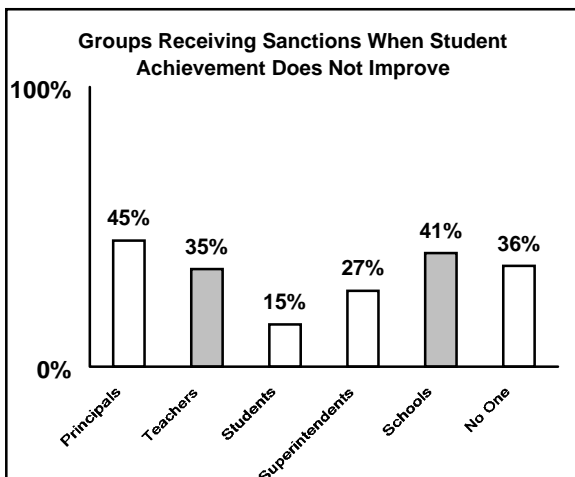

Top performing, high poverty schools have state or district accountability systems in place that have real consequences for adults in the schools.

The 1994 Title I law for the first time held high poverty schools accountable for the academic achievement of their students. Recent developments in some states, notably Texas, North Carolina and Kentucky, show that accountability for results is related to improvement in student achievement. Policymakers hoped that by emphasizing student results and attaching strong accountability provisions for school districts, they could allow school systems the freedom to devise their own strategies for getting there.

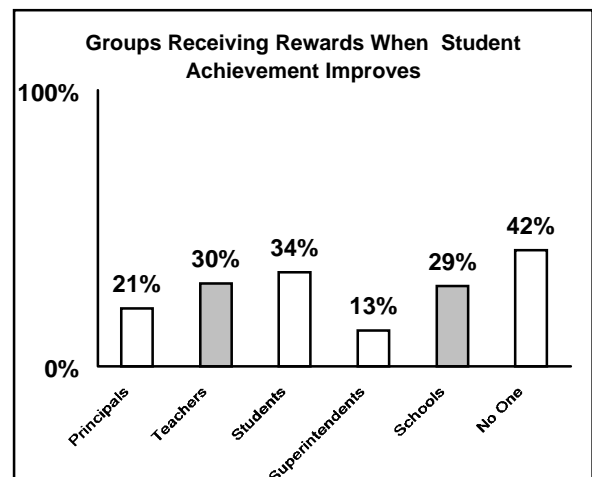

Title I accountability is far from fully realized. *Education Week's Quality Counts 1999* reports that just 31% of states have systems to hold schools and principals accountable for student performance. Only 20% of the states have these mechanisms for teachers and 24% hold entire school districts responsible for showing students gains.

Accountability for student achievement is an important characteristic of our pool of top performing schools in that nearly two-thirds of the respondents reported that they were operating within systems that held adults responsible to some degree. A full 45% of our respondents reported that accountability took the form of strong sanctions for schools and principals. Similarly, 35% of the high poverty schools in our survey report that teachers are held responsible for student achievement.

One in three schools report there are rewards for students when they improve, and somewhat fewer than one in three teachers receive rewards when their students post gains. A higher percentage of schools, 42%, report no rewards for improving student achievement. Overall, the respondents reported clearer and more frequent sanctions for adults than for students and fewer rewards for adults in these schools.

Note: Schools had the option to check more than 1 selection. This explains why the percentages exceed 100.

Note: Schools had the option to check more than 1 selection. This explains why the percentages exceed 100.

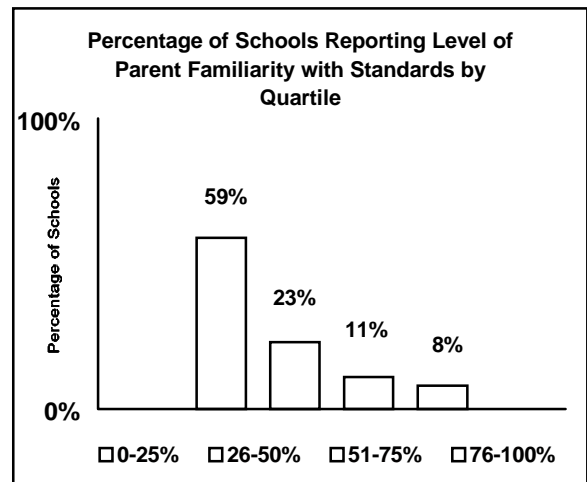

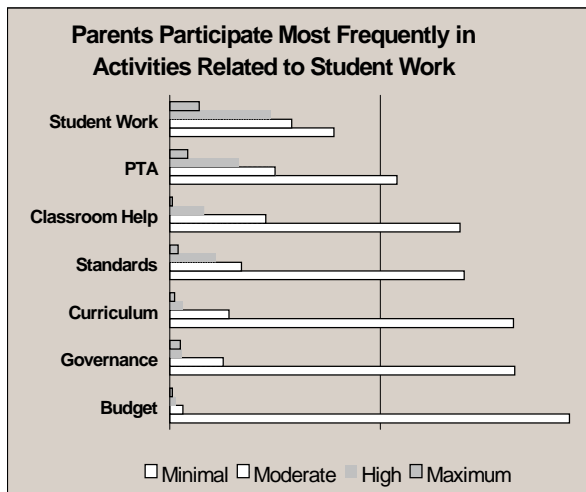

Top performing, high poverty schools focus their efforts to involve parents on helping students meet standards.

Since its inception in 1965, the Title I legislation has supported parent involvement. Traditionally, local and districtwide parent councils were involved either in monitoring how the district spent Title I funds or in governance. This involvement was in keeping with the emphasis on "inputs"—the investment of resources as opposed to “outcomes” or student results—in the Title I law before the 1994 reauthorization.

As the graph below indicates, parent activity in top performing high poverty schools indicates that these schools are increasingly focusing their parent involvement efforts toward areas that most directly affect student achievement. In these schools, traditional roles for parents as fundraisers are being expanded to include processes to help parents improve their knowledge of standards and their understanding of student work.

Nearly one in three schools in this survey reported that 25-50% of their parents were involved in processes to help them understand the quality of student work; one in four said that 50-75% of their parents were involved in processes to help them understand student work.

It appears that this group of top performing, high poverty schools is moving in the direction encouraged by the 1994 law which encouraged schools to involve parents in more academic areas of their children's schooling.

SECTION 3: Survey Schools At A Glance

The Title I program provides funding to nearly every school district in the country. The breadth of the program's reach is illustrated by our survey respondents who represent every major region of the country, with the largest representation from the South at 47%; 26% from the Midwest; 15% from the Northeast and 12% from the West. The respondents range from small town America (62%) to some of the nation's largest urban areas (38%).

The majority of the schools are neighborhood schools that accept all of the children in their attendance area (67%). The next largest segment is schools with open enrollments that accept children from throughout the school district (30%). True to the origins of the Title I legislation, elementary schools make up the largest number of respondents.

The 1994 reauthorization gave schools more flexibility to establish schoolwide Title I programs, and 79% of respondents took advantage of that opportunity to allow all of their students to benefit from the program. The reauthorization also sought to place more budgetary control of Title I funds at the school-building level, and 56% of the schools surveyed reported having control over all of their Title I dollars.

The schools have an average enrollment of 509 students and are led by principals who have served on average 4 ½ years at the school. The average school had a student enrollment in excess of 60% white; 17% African American; 13% Latino; 2% Asian; and 4% Native American. The average limited English proficient (LEP) population is 10%.

SECTION 4: Methodology

In spring 1998, the Council of Chief State School Officers (CCSSO), in collaboration with the Education Trust, asked the chief state school officer of every state to voluntarily participate in a project to identify top performing, high poverty schools. Twenty-one states agreed. The project targeted schools that served student populations in the 50-75% poverty range and the 75-100% poverty range.

Each participating state submitted a list of its top performing, high poverty schools based on assessment results in reading and mathematics administered at the elementary, middle and high school level. The schools were further categorized as either High Achievement or Most Improved. The High Achievement category included the top 10 scoring high poverty schools in terms of student performance. The Most Improved category included those schools who had made the greatest increases in assessment scores over a two-year period. The survey yielded a list of 1,200 top performing, high poverty schools representing every region of the country.

The results of the CCSSO project were compiled into a database for analysis by the Education Trust. The next step required linking the Education Trust top performing schools database to the U.S. Department of Education's public schools locator database to obtain mailing addresses for each of the 1,200 schools.

The Education Trust then designed a survey that was mailed to each of the 1,200 schools in October 1998. The survey (Appendix A) focused on discovering the strategies these schools utilized to increase achievement. By mid-November 1998, 366 schools responded to the survey. The results were coded, entered and analyzed and comprise the content of this report.

While we sought to survey "high performing" high poverty schools, each state determines the rigor of its state assessment. Therefore, state-by-state comparisons cannot be made regarding the level or content of student achievement. We urge readers of this report to bear these factors in mind in interpreting the results.

SECTION 5: Conclusion

A survey such as this one offers a glimpse into what separates these high poverty schools from others who are not showing the same amount of progress. The one aspect that pops out from the responses is the extent to which state standards inform the work of top performing schools and raise the adults' expectations for their students. The respondents told us that they use standards to design instruction, assess student work, and evaluate teachers. Standards also provided the framework for professional development of teachers. They guided the monitoring of student progress and helped schools target the kinds of extra support struggling students needed to become proficient. Parents, by and large, were increasingly more active in the academic aspects of school life than in governance and budgets. Making adults accountable for making sure that their students meet standards was another factor that showed up in these schools.

But a survey can only begin to piece together a picture of what makes schools work. The findings have raised several questions that the Education Trust believes warrant further investigation. For example, we don't know how professional development dollars are spent or what happens in teachers' meetings to examine student work. The survey only offers clues about the overall impact of Title I dollars.

The Education Trust intends to pursue some of these questions over the coming months. This survey has been invaluable in helping us surface promising practices and, most important, pinpointing schools where they are making these practices work for poor students. Our next task is to find out why they work, so we can share these lessons with policymakers and educators who care about the education of poor children.

Top Performing Schools Directory

How to use this directory

What the directory includes:

We created this Directory to respond to our desire, and the desires of advocates, policy makers and educators for examples of high poverty schools that are working and proving that their students can achieve at high levels.

Creating this directory represents a beginning rather than an end. As with most research we raised as many questions as we answered. Are all of the students in these schools achieving at high levels? No, they are not. Relatively low percentages of students are performing above the proficiency level in some of the schools in the high achieving category. Many of the schools that cited as “most improved” still have a long way to go. Their current “good” may not be good enough when compared to the standard, but it is truly a step in the right direction and we should recognize it as such. The important fact is that we are not lowering the standards for the students in high poverty schools. The data from this survey indicate that, with continued support and hard work, more students in high poverty schools can reach high standards.

This directory includes demographic and achievement data on each of the 366 schools that responded to the survey. Participation in the survey was voluntary. States not included in this report either chose not to participate or did not have state assessments upon which to select schools to meet the criteria. The survey was mailed to 1200 schools in 21 states based on research done by the Council of Chief State School Officers (CCSSO) which asked each state’s chief education officer for a list of its 10 highest achieving and most improved schools. The schools were selected based on state assessments in reading and math, and on poverty categories, 50-74% and 75-100%.

We strongly recommend that you read the Technical Notes on State Proficiency Definitions for further information about how the scores were compiled and reported. Where available we provided state average scores by subject and grade.

We recommend that this directory not be used to:

- **Make comparisons between states.** States use different tests and they set different levels of proficiency therefore achievement data in one state cannot be compared with that of another.
- **Make determinations about what students know.** Some states did not report cut off scores for proficiency which makes it difficult to make a judgment about what the students know when they exceed the state’s proficient level.

Technical Notes on State Proficiency Definitions

Kentucky

Schools in this list were selected based on their accountability indices. Further, only those Title I schools showing progress over the three-year period of 1994-95, 1995-96, and 1996-97 were selected. A school's accountability index is not equivalent to the percent of students scoring at or above the proficient level of performance; however, it does indicate how well students in a given school are performing in terms of the percent of novice, apprentice, proficient and distinguished.

Note that in the 75-100% poverty range at the middle and high school levels and in the 50-74% poverty range at the high school level, no schools were identified as High Achievement. While some Title I schools in these poverty ranges/grade levels could have been considered as high improvement, they were not listed here because their performance was below the state average.

Mississippi

A database of ITBS/TAP scores was created in which October 1997 and 1996 results were assigned to the children's school of attendance in the prior year (this meant the grade 4-9 scores effectively became evaluations of grades 3-8. This was then merged with the Percent of Free and Reduced Lunch eligibility data from the Title I 71 project (1996-97 school year) to yield achievement and percent low income information for 591 schools serving any of grades 3-5 and 310 schools serving any of grades 6-8. A weighted average of reading and mathematics data for each school was computed for grades 3-5 and 6-8 and results were sorted by achievement and poverty levels. Only one year of data was available for Algebra so improvement scores could not be computed. Also there was no data separated grade 8 from grade 9 (or above) scores. To keep results at the secondary level only for this tier, schools whose first grade level was less than grade 9 were eliminated. This left 122 "pure" high schools to comprise the algebra sample (unfortunately no high school reading/language arts data suitable for inclusion was available.

New York

The [New York] data for third and sixth grades are based on the Pupil Evaluation tests in reading and mathematics and do not identify students at the proficient level. The PEP tests were designed to identify students in need of remediation. Because the department has recognized the need to identify students performing at higher levels, we have identified some benchmarks on the PEP tests for this purpose. These levels are useful as an estimate of the percentage of students in a school reaching a given level in a given year. Because the tests were not developed to measure at these higher levels, these percentages are not reliable indicators of year-to-year change. Therefore the reading test data enclosed are based on the percentage of students who scored above the State reference point (SRP), the point that identifies students who require remediation. These data provide a reliable indicator of change. The SRP on the mathematics test does not provide sufficient distinction among schools to identify the highest performing.

Oklahoma

These schools were drawn from a rank order with the following two exceptions: Schools that tested fewer than 10 children were not included. Schools who are on the Oklahoma low-performing, high challenge list -- schools who do not have satisfactory achievement in all core content areas -- were not included.

Virginia

Virginia reported student and school results based on national percentiles. Other modifications are: Data is reported for grades 3, 5 and 8 in reading/language arts and mathematics due to the fact that Title I schools in Virginia are concentrated at the elementary and middle school levels. Statewide averages for all schools regarding percentile ranks are not available by quartile. Instead, available statewide averages reflect the partial battery score, which is comprised of reading, mathematics and language at grades 3, 5 and 8. Statewide data was not disaggregated by school poverty level, therefore no data is available. Based on the performance indicators for Virginia during the 1996-97 school year, "high scoring" is defined as the average percentage of the school relative to the students scoring above the 50th percentile on the Stanford 9 in reading/language arts and mathematics.

Wisconsin

Percents are based on all students enrolled in the school for a full academic year whether or not they took the test. Low-income percentages are based on percent of students enrolled for full academic year who meet the low-income requirements for subsidized lunch. Students are assumed to be middle or high income unless they are known to be low income. Data are probably most accurate at grade 4. All results are based on CTB Terra Nova Multiple Assessments and Wisconsin-set proficiency standards.

Wyoming

In calculating AYP, Wyoming looks at a combination of scores across both content areas. The baseline year against which progress is measured consists of a combination of two years 1994-95 and 1995-96. The comparison or post data point consists of a combination of two years 1995-96 and 1996-97. The transitional assessment that we are using is NRT scores. The information on Most Improved remains combined across Reading and Math content areas because, in one of the years used in calculating the baseline, were missing approximately 90% of the Math scores. Also, grades are combined across the elementary, middle and high school levels due to the small numbers that we have at individual grade levels. In reporting Most Improved data, we can only include those schools that have complete data across all the years.

The Education Trust High Performing Schools Survey

At the conclusion of this survey, we will be asking you to share with us your thoughts on what factors have contributed to your school's success in increasing student achievement. First, though, we need your help with a very brief questionnaire. Thank you.

PROFILE

1. Is your school a Title 1 school?
 Yes If yes: Targeted Assistance School-wide
 No
2. What is your school's grade configuration?
 K-6
 7-9
 10-12
 K-12
 Other (Specify) _____
3. What is the size of your student enrollment?
 Less than 500 1,000-1,499
 500-999 1,500 or more
4. Indicate your school's student enrollment by race and ethnicity. (Provide percentages.)
_____ White
_____ African American
_____ Latino
_____ Asian
_____ Native American
5. What percentages of your students are Limited English Proficient?
 0-10% 31-40%
 11-20% 41-50%
 21-30% More than 50%
6. Is your school a(n) ... (choose one)
 Neighborhood school, accepting all children in the attendance area
 Magnet school or school within a school (with admissions criteria)
 Charter school
 School for gifted and talented students
 School with a program for gifted and talented students

Percentage enrolled in gifted and talented program: _____

- Open enrollment that accepts children from throughout the district
- Other (please describe): _____

7. Which **ONE** best describes your school's geographic setting?

- Inner City
- Other Urban
- Town
- Small town or rural community

8. How many years have you served as principal at this school?

- Less than 1 year
- 1-3 years
- 4-5 years
- 6 or more years

STANDARDS

9. On a scale of 1 to 5, rate the degree to which standards are utilized in your school to design instruction. (Circle one)

1	2	3	4	5
Standards are used extensively		Standards used in certain subjects/grades or by some teachers		Standards not being used at all

10. In what ways are standards used to support your school's efforts to increase student achievement? (Check all that apply)

- Design curriculum
- Assess student progress
- Evaluate teacher effectiveness
- Improve information for parents

11. Approximately what percentages of the teachers in your school use the state standards to design their instructional units?

- 0-25%
- 26-50%
- 51-75%
- 76-100%

12. Do teachers have regular mechanisms to collectively analyze student work against state standards?

- Yes
- No

13. If so, how often do they meet?

- Weekly
- Bi-Monthly (twice a month)
- Monthly

14. Approximately what percentages of teachers participate?

- 0-25%
- 26-50%
- 51-75%
- 76-100%

15. On a scale of 1 to 5, rate the degree to which your school has implemented procedures to monitor students who are falling behind in their instruction and provide them with extra help. (Circle one)

1	2	3	4	5
Comprehensive system: students monitored		Extra help provided to students on an as-		Students don't get much extra help

APPENDIX A

frequently and help provided whenever needed

needed basis, but no school-wide system

except from the occasional teacher

CURRICULUM AND INSTRUCTION

Language Arts

16. Who developed your school's Reading/Language Arts curriculum?

- State
- District
- Teachers at our school
- External model developer (e.g. Success for All, Core Knowledge)

17. What is the primary Language Arts text used at your school?

- Classroom Literature Sets
- Textbook: Name of Publisher: _____
- Combination of Literature Set and Textbook: Publisher of Textbook _____

18. How many books are students in your school required to read each year? (Circle one)

No Policy	1-9	10-19	20-25	More than 25
-----------	-----	-------	-------	--------------

Mathematics

19. Who developed your school's Mathematics curriculum?

- State
- District
- Teachers at our school
- External model developer (e.g. Success for All, Core Knowledge)

20. What is the primary Mathematics text used at your school?

Name of Publisher: _____

21. In your school, which of the following instructional practices have increased or decreased over the last few years:

<i>Use of ditto sheets</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>
<i>Students problem solving in groups</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>
<i>Students discussing work with other students</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>
<i>Time spent on reading</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>
<i>Time spent on math</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>
<i>Use of technology</i>	<input type="checkbox"/> <i>Increased</i>	<input type="checkbox"/> <i>Decreased</i>	<input type="checkbox"/> <i>About same</i>

22. Has your school adopted scheduling changes to provide extended learning time in Reading and Math?

- Yes If yes, in which subject(s)? Reading Math Both
- No

FAMILY INVOLVEMENT

23. What percentages of parents are actively involved in the following aspects of your school?

	0-25%	26-50%	50-75%	76-100%
<i>Budgets</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Governance</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Curriculum</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Understanding Student Work</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Standards</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>PTA</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Helping in Classroom</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

24. What percentages of parents are familiar with state standards?

- 0-25%
- 26-50%
- 51-75%
- 76-100%

PERSONNEL/STAFFING

25. Have you reduced class size during the last three years? If yes, how?

- Yes, school-wide.
- Yes, in certain subjects/grade levels.
(Specify: Subject(s): _____ Grade(s): _____)
- No, not at all.

26. How many of the following **INSTRUCTIONAL** personnel are on your staff?

- _____ Full time Regular Classroom Teachers (non-Special Education)
- _____ Full time Resource Teachers (Non-Classroom – Math, Reading, Science, ESL)
- _____ Instructional Aides, Assistants, Paraprofessionals

27. Roughly, what percentage of first year teachers do you have on your staff this year?

- 0-10%
- 11-20%
- More than 20%

28. In your district, upon which of the following groups are sanctions levied if student achievement doesn't improve?

APPENDIX A

(Check all that apply)

- | | |
|-------------------------------------|--|
| <input type="checkbox"/> Principals | <input type="checkbox"/> Superintendents |
| <input type="checkbox"/> Teacher | <input type="checkbox"/> School |
| <input type="checkbox"/> Students | <input type="checkbox"/> No One |

29. In your district, which of the following gets rewards of any sort if student achievement improves? (Check all that apply)

- | | |
|-------------------------------------|--|
| <input type="checkbox"/> Principals | <input type="checkbox"/> Superintendents |
| <input type="checkbox"/> Teacher | <input type="checkbox"/> School |
| <input type="checkbox"/> Students | <input type="checkbox"/> No One |

30. Roughly, what percentage of your Title 1 dollars last school year was spent on the following?

	0-10%	11-20%	21-30%	More than 30%
<i>Professional Development</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Class Size Reductions</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Instructional materials and/or equipment</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Instructional Personnel (teachers, aides, paraprofessionals)</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>School Counselors</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<i>Parent Involvement</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

31. What portion of the Title 1 budget do you control at the school level?

- All of the Title 1 funds
- All Title 1 funds, excluding personnel
- None

32. Please describe the three most important factors that have contributed to your ability to raise student achievement. Attach additional sheet, if necessary.

33. Please describe three barriers you encountered in your efforts to increase student achievement.
Attach additional sheet, if necessary.

34. Please share anything else about your experiences that you believe would be helpful to leaders in other high poverty schools.
Attach additional sheet, if necessary.
